Q11: Joins in SQL are used to combine rows from two or more tables based on a related column between them.

Q12: The different types of joins in SQL are: Inner join, Left join, Right join and Full outer join.

Q13: SQL Server is a relational database management system developed by Microsoft.

Q14: Primary key in SQL is a column or set of columns that uniquely identifies each row in a table. It cannot contain null values and is used to maintain the integrity of the data in the table.

Q15: ETL stands for Extract, Transform, and Load. It is the process of extracting data from various sources, transforming it into a format that can be loaded into a target database and loading it into the target database. It is used to integrate data from different sources into a centralized location for easy reporting and analysis.
